

# Got Energy Leaks?

Check out these meters that detect electrical, electromagnetic, or thermal leaks in your home!

Inquire at the checkout desk

Become a home energy detective. Check the efficiency of your home and appliances and cut your energy costs with one of three devices you can check out for up to 14 days.

- **Kill a Watt EZ Meters:** Determine the efficiency of any home appliance by counting its energy consumption by the kilowatt hour. The meters allow you to calculate cumulative electrical expenses and forecast costs to operate your appliances by the day, week, month, or year.
- **EMF Detection Meters:** Detects cell phone radiation and extremely low-frequency electromagnetic fields.
- **Thermal Leak Detectors:** Help locate areas of your home that are poorly insulated and may lead to higher heating and cooling bills. Pinpoint problem spots such as drafty windows and doors, hidden leaks, uneven insulation in ceilings or walls, and leaks in air conditioning and heating ducts. The devices can also diagnose engine misfires and monitor your refrigerator and freezer settings.
