# 1 Executive Summary

---

Stantec has completed a Phase II Environmental Site Assessment (ESA) of the property identified as the 900 Palmetto Street, Clearwater, Pinellas County, Florida (Parcel ID No. 10-29-15-45000-006-0040) on behalf of the City of Clearwater (the "Client"). The Client has been identified as the End User of this report; with the intended use of this Phase II ESA in support of an anticipated sales transaction. The assessed study area is herein referred to as "the subject property" or "the property." The property consists of approximately 0.18 acres of land (as depicted in **Figures 1 and 2**) and is currently undeveloped vacant land.

## 1.1 Purpose and Background

This assessment was prepared in general accordance with the American Society of Testing and Materials (ASTM) *Standard Practices for Environmental Site Assessments: Phase II ESA Process* (ASTM Designation: E1903-11). The purpose of this Phase II ESA was to evaluate the recognized environmental conditions (RECs) identified in the Phase I ESA, completed by Cardno now Stantec in November 2022, for the purpose of providing sufficient information regarding the nature and extent of contamination (if present) in the shallow subsurface.

The RECs identified in the Phase I ESA included a historical adjacent land use (auto repair); offering the potential for migrating contamination (petroleum and solvents).

The property was deemed eligible for Phase II ESA funding by EPA on April 11, 2023, and the Site-Specific Quality Assurance Project Plan (SS-QAPP) was approved April 19, 2023.

## 1.2 Scope Summary

To address the potential impacts associated with the REC, Phase II ESA activities included:

- Installation of subsurface borings at three (3) locations within the property boundaries at locations selected based on historical land uses, with extension of all of the borings for the installation of temporary groundwater monitor wells. Installation locations were based on the anticipated locations of subsurface impacts while considering the property's use, subsurface utilities and surface features.
- Collection of three groundwater samples for laboratory analysis for volatile organic compounds (VOCs), low-level polycyclic aromatic hydrocarbons (PAHs), the RCRA 8 metals, and total recoverable petroleum hydrocarbons (TRPH) via FL-PRO.
- Collection of groundwater elevation data, relative to an arbitrary benchmark, to assist in determining the shallow groundwater flow direction for the subject property.

## 1.3 Subsurface Investigation Results Summary

- Comparison of the laboratory analytical results to Chapter 62-777 FAC groundwater cleanup target levels (GCTLs) revealed no constituents in excess of their associated GCTLs.
- Groundwater flow direction across the property was calculated to be generally toward the east.

## **1.4 Conclusions**

No analyzed parameters were detected above applicable GCTLs in the groundwater samples collected from the three temporary wells installed and sampled as part of this investigation.

## **1.5 Recommendations**

Based on the results of this Phase II ESA, no additional assessment is recommended.

***This Executive Summary is a cursory summary of findings. The full report must be read in its entirety for a comprehensive understanding of these conclusions/recommendations.***

## 3 Introduction

---

### 3.1 Site Description and Features

The subject property is located on the northeast corner of Palmetto Street and Vine Avenue in Clearwater, Pinellas County, Florida. The USGS / Site vicinity map and the site study area location are presented in **Figures 1 and 2**, respectively. The parcel identified as the subject property is listed below with its abbreviated legal description (as contained in County files):

- Parcel ID. 10-29-15-45000-006-0040 (900 PALMETTO ST CLEARWATER)  
JURGEN'S ADD TO CLEARWATER BLK F, LOTS 4 & 5

At the time of this investigation, the subject property was undeveloped, vacant land.

### 3.2 Operational History

The subject property was developed with a church and associated structure from 1949 until the structures were demolished (one in 2000 and the other in 2019).

### 3.3 Environmental Permits or Enforcement Actions

A file review conducted as part of the November 2022 Phase I ESA did not reveal any recorded environmental permits or enforcement actions associated with the subject property.

### 3.4 Known Spills or Releases

A review of agency documentation conducted as part of the November 2022 Phase I ESA revealed no documented spills or releases associated with the subject property.

### 3.5 Previous Investigations and Interim Source Removal Activities

Other than the Phase I ESA previously mentioned, no other previous assessments have been identified or provided.

### 3.6 Special Terms and Conditions (User Reliance)

No ESA can eliminate all uncertainty. Furthermore, any sample, either surface or subsurface, taken for chemical analysis may or may not be representative of a larger population. Professional judgment and interpretation are inherent in the process and uncertainty is inevitable. Additional assessment may be able to reduce the uncertainty. Even when Phase II ESA work is executed with an appropriate site-specific standard of care, certain conditions present especially difficult detection problems. Such conditions may include, but are not limited to, complex geological settings, the fate and transport characteristics of certain hazardous substances and petroleum products, the distribution of existing contamination, physical limitations imposed by the location of utilities and other man-made objects, and the limitations of assessment technologies.

Phase II ESAs do not generally require an exhaustive assessment of environmental conditions on a property. There is a point at which the cost of information obtained, and the time required to obtain it outweigh the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. If hazardous substance or petroleum releases are confirmed on a parcel of property, the extent of further assessment is related to the degree of uncertainty that is acceptable to the user with respect to the real estate transaction. Measurements and sampling data only

represent the site conditions at the time of data collection. Therefore, the usability of data collected as part of this Phase II ESA may have a finite lifetime depending on the application and use being made of the data. An environmental professional should evaluate whether the generated data are appropriate for any subsequent use beyond the original purpose for which it was collected.

This report is for the use and benefit of and may be relied upon by the entity(s) identified in the Executive Summary of this report as the Client, as well as any of its affiliates and their respective successors and assigns, in connection with a commercial real estate transaction involving the property, and in accordance with the terms and conditions in place between Stantec and the Client for this project. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of Stantec is at the sole risk and expense of such third party.

Stantec makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied.

## 4 Site Description & Investigation Methodologies

---

### 4.1 Sampling Objectives

#### 4.1.1 Conceptual Site Model and Sampling Plan

The conceptual site model considered the on-site and nearby land uses (particularly the off-site historical auto repair facility). Potential distribution of contaminants, as well as the anticipated fate and transport characteristics of contaminants in the setting being assessed were also considered. The sampling plan was designed to provide for the collection of potentially contaminated environmental media, at locations and depths where the highest concentrations are likely to occur in consideration of suspected utility locations.

The sampling plan developed for this project was based solely upon information provided in the November 2022 Phase I ESA.

#### 4.1.2 Chemical Testing Plan/QAQC

The chemical testing plan was designed to detect the contaminants suspected to be present in the samples collected. This testing plan included tests which provide quality assurance (QA) and techniques that provide quality control (QC) over the chemical analysis. A completed chain of custody record accompanied each sample shipment to the analytical laboratory. Chain of custody records provide written documentation regarding sample collection and handling, identify the persons involved in the chain of sample possession, and a written record of requested analytical parameters.

### 4.2 Field Investigations and Methods

#### 4.2.1 Soils

On April 20 and 21, 2023, Stantec supervised a licensed drilling contractor during the advancement of three soil borings at the locations presented in **Figure 3**. Borings were advanced using a combination of hand auger and direct push technology (DPT) drilling methods to boring completion depth, as well as installation of temporary monitoring wells for groundwater sample collection.

The three soil borings were advanced to an estimated depth of 13 feet bls to facilitate lithology characterization, field screening for potential environmental impacts as well as the proper collection of groundwater samples from a representative portion of the shallow groundwater aquifer.

Field logs, calibration logs, and boring logs are provided in **Appendix A**. Field activities conducted were performed in accordance with applicable FDEP Standard Operating Procedures (DEP-SOP 001/01) and the EPA-approved site-specific Quality Assurance Project Plan (approved April 19, 2023).

#### 4.2.2 Shallow Groundwater

On April 20, 2023, Stantec supervised a licensed drilling contractor during the installation of three shallow temporary monitoring wells (TMW-1 through TMW-3) to 13 ft bls at the locations presented in **Figure 3**.

Depth to groundwater measurements were recorded at each temporary monitoring well immediately preceding well purging and sampling. Each well was completed with 1-inch schedule 40 PVC along with 10 feet of prepack 0.01-slot well screen set from an estimated depth of 3 to 13 feet bls to bisect the top of the water table which was encountered at a depth of five to six feet bls. Each well was developed using a properly decontaminated pump for approximately 30 minutes or until a relatively sediment free discharge was produced... Personnel surveyed the top of well casing elevation at each location and the water levels were converted to groundwater elevations by subtracting the depth to water from the top of casing elevation for each well. The depth-to-water (DTW) was measured to compare to the TOC data to assist in estimating a site-specific shallow groundwater flow direction.

Each well was sampled the following day (April 21, 2023) 24 hours after completion of well development. Groundwater purge and sampling activities were performed in strict accordance with FDEP protocols and SOPs. Each groundwater sample was analyzed by a State of Florida approved laboratory for the analysis as follows:

- Volatile Organic Compounds via EPA Analytical Method 8260B
- Low level PAHs via EPA Analytical Method 8270C
- 8 RCRA Metals via EPA Analytical Method 6010/7471
- Total Recoverable Petroleum Hydrocarbons (TRPH) via FL-PRO

Once groundwater sampling was complete, Stantec properly abandoned (by removal) each of the three temporary monitoring wells. Each of the boreholes advanced during this assessment were backfilled and compacted to match existing grade using the soil cuttings generated at each drilling location.

## 5 Environmental Assessment Results

---

### 5.1 Physical Setting and Subsurface Conditions

#### 5.1.1 USGS Hydrogeological Data

Hydrogeological resources were examined to identify the probable direction of surface water and shallow groundwater flow at the site as part of the Phase I ESA investigation. The USGS Clearwater, Florida 7.5-minute series topographic map produced in 2018 was reviewed. The map shows the site being located at an elevation of 23 feet above mean sea level. Based on map topography contours, the inferred primary direction of groundwater flow for the immediate vicinity of the subject site is generally toward the east. The USGS Topographic Map is included as **Figure 1**.

#### 5.1.2 Site-Specific Geology

Site-specific geological data collected as part of this investigation during boring installation revealed primarily fine-grain sands above the water table and clayey-sand or clay within the water table. The water table was encountered five to six feet below land surface.

#### 5.1.3 Site-specific Groundwater Elevation Data

Groundwater levels were measured on April 21, 2023, and DTW measurements and groundwater elevations, calculated with surveyed TOC referenced to an arbitrary datum. Groundwater contours and the inferred groundwater flow direction are presented on **Table 1** and depicted on **Figure 4**. For the recent sampling event, the direction of groundwater flow was generally to the east.

### 5.2 Shallow Groundwater Assessment Results

A comparison of the laboratory analytical results of the collected shallow groundwater samples to GCTLs is presented in **Table 2**. The temporary monitor well locations are depicted on **Figure 3**. Laboratory analysis revealed no impacts in excess of GCTLs.

### 5.3 Laboratory Analyses Quality Control (QC) Observations and Interpretations

No significant QA/QC issues were encountered by the laboratory. All samples were received in good condition, with all spikes and surrogates were recovered within established limits; and all method-specified holding times were met. Minor exceptions noted on select quality control batch samples were primarily attributed to matrix interference and did not affect data quality or usability.

Laboratory Analytical Reports are included as **Appendix B**.

## 6 Conclusions and Recommendations

---

Based upon the results from this Phase II ESA, the subject property does not appear to have been adversely impacted by the adjacent historical auto repair facility (the REC identified in the recently completed Phase I ESA). As such, no additional assessment is recommended at this time.

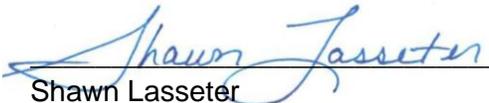

## 7 Qualifications/Signatures of Environmental Professional(s)

---

This *Phase II Site Assessment Report* was prepared for the City of Clearwater.

I have checked all data and calculations presented herein for accuracy and the basis for all conclusions and recommendations have been described. I further certify, this document meets or exceeds Stantec's standards for editorial content, technical accuracy, and quality assurance verification.

**Prepared by:**

  
Shawn Lasseter  
Senior Project Manager  
Stantec

*With assistance by Alexander Jones, Staff Geologist*

**QA/QC by:**

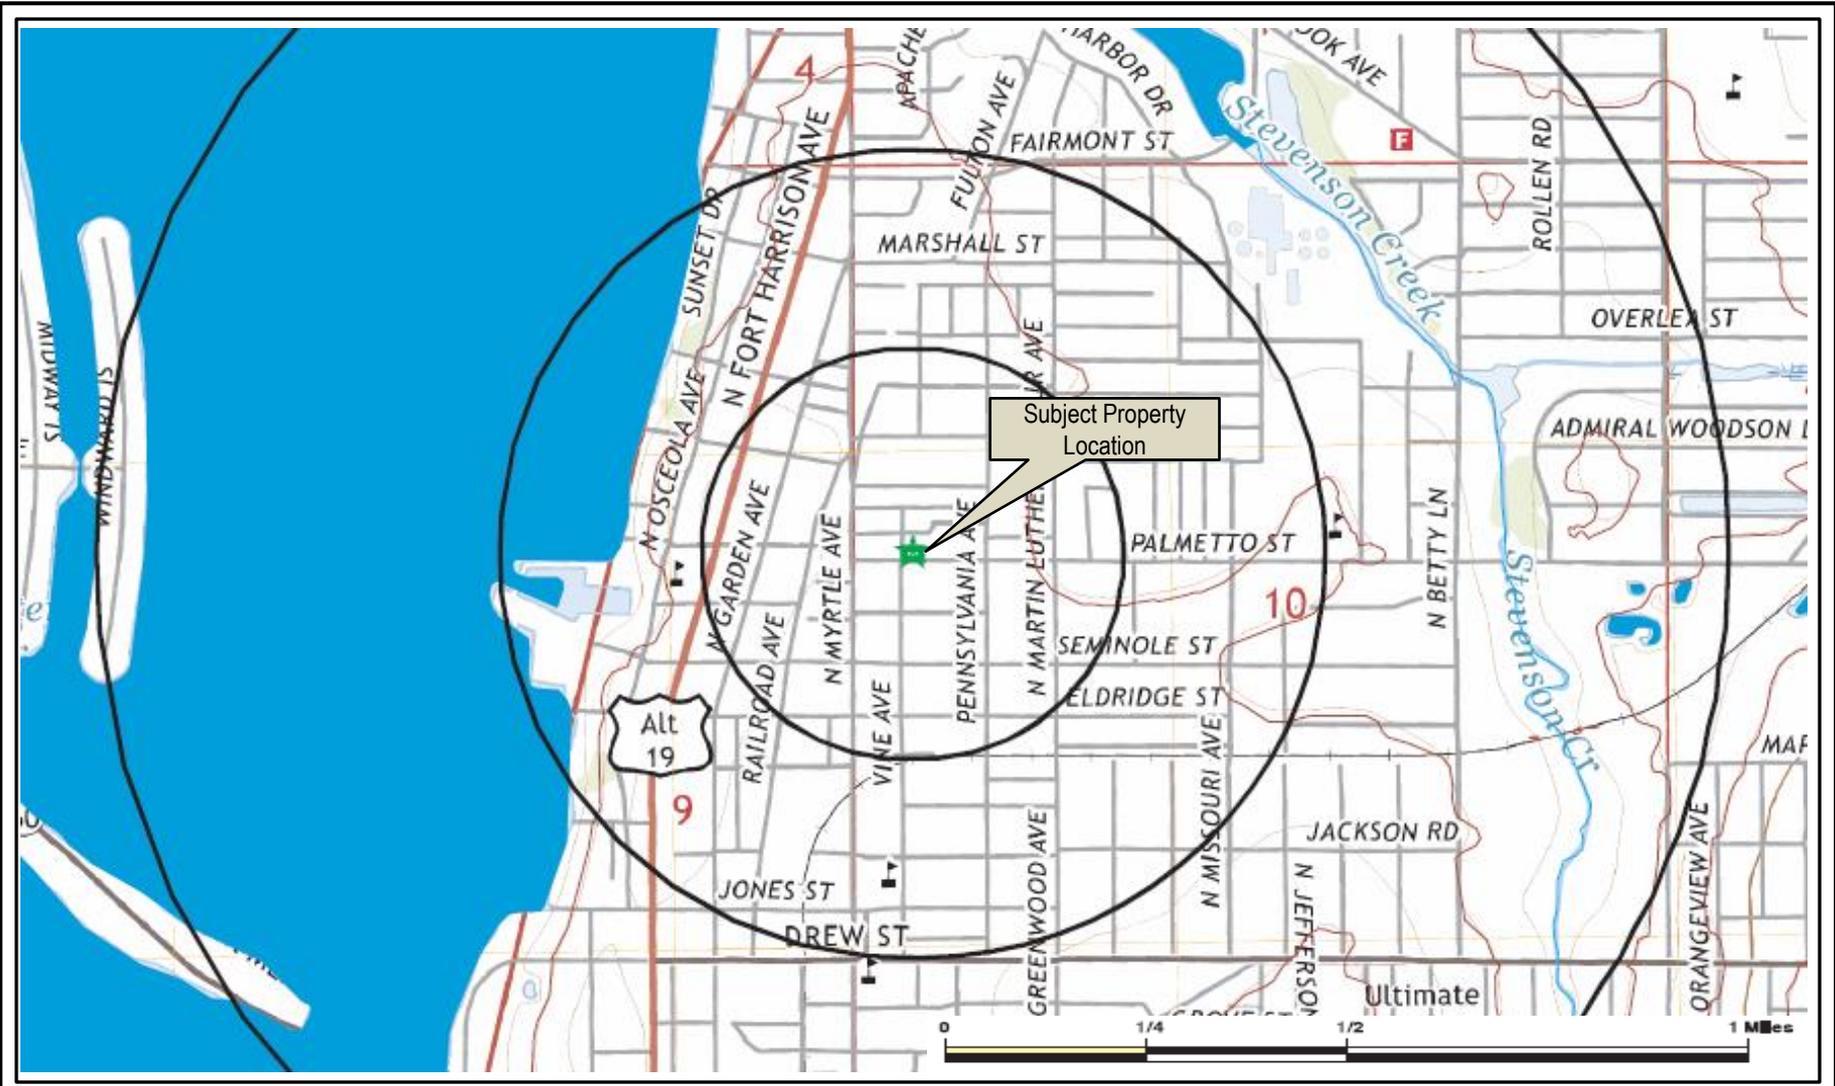

I, Andrew Long, PG, certify that I currently hold an active license in the State of Florida and am competent through education or experience to provide the engineering service contained in this *Phase II Site Assessment Report*. I further certify that in my professional judgment, this report meets the general requirements of ASTM Method E 1903-21, Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process.

  
Andrew Long

Date: May 4, 2023

Notes:

GCTLs = Groundwater Cleanup Target Levels specified in Table I of Chapter 62-777, F.A.C. 4/17/2005

NADCs = Natural Attenuation Default Concentrations - Groundwater Criteria specified in Table V of Chapter 62-777, F.A.C. 4/17/2005

GCTL indicates concentration exceeds GCTL

NADC indicates concentration exceeds NADC

I = Estimated value, between laboratory reporting limit and method detection limit

U = Indicates that the compound was analyzed for but not detected above the method detection limit (MDL).

**Bold** Bold results denote analyte was detected above the laboratory method detection limit

\* = As provided in Chapter 62-520, F.A.C. 4/17/2005

\*\* = As provided in Chapter 62-520, F.A.C. 4/17/2005, multiplied by 10X

\*\*\* = As provided in Chapter 62-520, F.A.C. 4/17/2005, multiplied by 100X

## **Laboratory Analytical Reports**

April 28, 2023

Shawn Lasseter  
Cardno  
380 Park Place Blvd  
Suite 300  
Clearwater, FL 33759

RE: LOG# 2385536  
Project ID: 900 palmetto St., Clw, FL

Dear Shawn Lasseter:

Enclosed are the analytical results for sample(s) received by the laboratory on Saturday, April 22, 2023. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by \* in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Genesis De Sousa for  
Kacia Baldwin  
kaciab@jupiterlabs.com

## ANALYTICAL RESULTS QUALIFIERS

Workorder: 2385536

Project ID: 900 palmetto St., Clw, FL

---

### PARAMETER QUALIFIERS

J1 Surrogate recovery was outside defined limits.

### PROJECT COMMENTS

2385536 A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

## QUALITY CONTROL DATA QUALIFIERS

Workorder: 2385536

Project ID: 900 palmetto St., Clw, FL

---

## QUALITY CONTROL PARAMETER QUALIFIERS

- J1 Surrogate recovery was outside defined limits.
- J3a LCS value exceeded accuracy control limits which could bias high sample results; however, sample data is non detect and was not impacted.

Checked By: LLL

## Sample Verification

Loose Caps?	No	All Samples on COC accounted For?	Yes
Broken Containers?	No	All Samples on COC?	Yes
pH Verified?	Yes	Written on Internal COC?	No
pH Strip Lot #	HC203864	Sample Vol. Suff. For Analysis?	Yes
Acid Preserved Samples Lot #	24674, 22633	Samples Rec'd W/ Hold Time?	Yes
Base Preserved Samples Lot #		Are All Samples to be Analyzed?	Yes
Samples Received From	courier	Correct Sample Containers?	Yes
Soil Origin (Domestic/Foreign)		COC Comments written on COC?	No
Site Location/Project on COC?	Yes	Samplers Initials on COC?	Yes
Client Project # on COC?	Yes	Sample Date/Time Indicated?	Yes
Project Mgr. Indicated on COC	Yes	TAT Requested:	STD
COC relinquished/Dated by Client?	Yes	Client Requests Verbal Results?	No
COC Received/Dated by JEL	Yes	Client Notified of discrepancies?	No
JEL to Conduct ALL Analyses?	Yes	Do VOC vials have headspace or a bubble >6mm (1/4")?	No
Number of Encores	0	Number of Lab Filtered Metals	0

Label Check to confirm JEL ID matches Client ID performed by JJJ on 4/22/23
